

Elementor Global Styles

- **Primary colour:** #FFFFFF (used for text, buttons and icons).
- **Secondary colour:** #191919 (dark background for header, footer and hero overlays).
- **Text colour:** #FFFFFF (white; identical to Primary).
- **Accent colour:** #FFFFFF (white; no distinct accent colour defined).

Fonts

The Elementor **Global Fonts** settings did not define custom font families. Inspecting the front-end suggests:

- **Headings:** Bold, condensed sans-serif similar to *Montserrat* or *Poppins*. Use a Google Font or self-host the font in the Next.js project.
- **Body text:** Clean sans-serif (likely the same family but lighter weight).

Use responsive font sizes to match the current design: large headings on hero sections (~64 px), subheadings around 32 px, and body text around 16–18 px.
